## USA Product Recall

Hydro-Gear is recalling certain hydrostatic transaxles used in MTD Gold riding mowers due to injury risk to the operator. Consumers should stop using the product immediately.

Hydro-Gear has identified a limited number of transaxles manufactured late in 2010 whose drive gear may fail causing the drive system to loose the ability to brake effectively, posing an injury risk to the consumer.

Consumers that have mowers with these suspect transaxles should stop using the product immediately and arrange to replace the transaxle.

Identify if your riding mower and transaxle are in the recall range.

## STEP 2

Transaxle Identification (see tables for affected models)

Step 1.
Identify the mower

Step 2.
Identify the transaxle
